
WellBot – AI Powered Wellness Chatbot Platform

Intelligent Healthcare Assistant with Hybrid AI and Real-Time Analytics

Avinash Gouda | Healthcare Technology Course | 2024

Made with GAMMA

Project Overview

What is WellBot?

An AI-powered wellness assistant that combines intelligent chatbot technology with prescription analysis and comprehensive health monitoring. WellBot serves as a centralized platform for health guidance, symptom assessment, and personalized wellness tracking.

Key Features

- *AI wellness chatbot with multi-model support*
- *Prescription image analysis and interpretation*
- *Comprehensive symptom checker*
- *Nutrition and wellness guidance*
- *Real-time user dashboard with activity tracking*
- *Admin monitoring and analytics system*

Made with GAMMA

Problem Statement

Prescription Confusion

Patients struggle to understand complex medical prescriptions and dosage instructions

Limited Access

No 24/7 access to quick, reliable health advice when medical professionals are unavailable

No Centralization

Lack of unified AI wellness platform integrating chat, tracking, and analytics

No Personalization

Absence of continuous, personalized health tracking and wellness recommendations

Proposed Solution: WellBot

AI Wellness Chatbot

Intelligent conversational interface powered by multiple AI models for accurate health guidance and symptom assessment

Prescription Analysis

Image recognition technology that reads and interprets prescription details, providing clear dosage instructions

Symptom Checker

Guided assessment tool that evaluates symptoms and provides preliminary health insights with appropriate recommendations

Nutrition Guidance

Personalized dietary recommendations based on user health profile and wellness goals

Admin Monitoring

Comprehensive analytics dashboard for administrators to track system performance and user engagement

Health Tracking

Real-time wellness monitoring including mood tracking, nutrition logging, and activity measurement

Made with GAMMA

System Architecture

*WellBot employs a **hybrid AI architecture** that routes queries through multiple language models to optimize response quality and cost efficiency.*

User Interface

Responsive frontend dashboard for patients and administrators

Flask Backend API

RESTful interface handling requests and data processing

AI Model Router

Intelligent routing system selecting optimal AI engine

Multi-Model AI

Groq, Gemini, Ollama, and OpenAI integration

MongoDB Storage

Secure document database for user data and analytics

Made with GAMMA

User Dashboard Features

Core Dashboard Components

- Mood Tracking

  Daily emotional wellness logging with trend visualization

- Nutrition Guide

  Meal logging and dietary recommendations based on health profile

- AI Chatbot

  Instant access to health guidance and symptom assessment

- Symptom Checker

  Step-by-step health assessment tool with severity indicators

- Profile Management

  Centralized control of health data and preferences

Made with GAMMA

New Update 1: Multi-Language System

Language Selection

Users can dynamically change the interface language with a single click, making healthcare accessible to diverse populations

Supported Languages

- *English (default)*
- *Hindi*
- *Kannada*
- *Spanish*

Global Accessibility

Breaking language barriers to provide healthcare assistance to users worldwide, regardless of their primary language

Made with GAMMA

New Update 2: Theme System

Light Theme

Classic light interface optimized for daytime use with reduced eye strain

Dark Theme

Sleek dark interface perfect for nighttime use, reducing blue light exposure

Users can switch between themes instantly, and the entire website background, components, and text colors update in real-time to match the selected theme.

Made with GAMMA

New Updates: Real-Time Features

👣 Footprint Counter

Real-time step tracking that updates throughout the day, encouraging users to maintain an active lifestyle with instant feedback on their physical activity

Admin Chatbot

Floating chatbot icon on the admin dashboard provides instant access to AI testing, allowing administrators to quickly verify chatbot responses and system functionality

Admin Dashboard & Conclusion

Admin Capabilities

User Management

View and manage all registered users

Chat Log Monitoring

Review conversation history and interactions

AI Usage Analytics

Track model performance and query patterns

Issue Reporting

View and address reported problems

System Statistics

Monitor overall platform health and metrics

WellBot's Impact

WellBot provides AI-powered healthcare assistance through secure, scalable architecture with real-time health monitoring, multi-language accessibility, and intelligent admin analytics.

WellBot aims to make healthcare assistance faster, smarter, and accessible to everyone.
